Service Exchange from Digital Realty is an advanced interconnection solution that enables seamless, on-demand, direct access to multiple clouds and networks.

Service Exchange is powered by Megaport, bringing together the core strengths of both companies.

- Digital Realty’s high availability data center offerings span from single rack colocation to multiple megawatt deployments across the globe, to suit your current needs and enable future growth.
- Megaport, the leading provider of elastic interconnection, has developed a platform that will keep pace with innovative cloud technologies and continue to expand to new markets.

**Future Proof Your IT Architecture**

**Secure, High-Performance Private Connections**
Remove the Public Internet from the connectivity equation to your IaaS, PaaS and SaaS providers.

**Colocation**

**Scale**

**Digital Realty Extended Footprint**

**Major Cloud Providers**

Amazon Web Services
Microsoft Azure
Google Cloud
IBM Cloud
Oracle Cloud
Alibaba Cloud
Salesforce

**Multi-Cloud Connectivity**
Simplify provisioning and management across multiple cloud platforms and regions by leveraging one port with many virtual connections.

**Office Locations**

**3rd Party Data Centers**

**Local Connections to On-Campus Cloud Providers**
Take advantage of optimized latency, redundancy, security and performance.

**Connected Campus**

**Multi-Locations to Meet Your Requirements**
Increase efficiency with fixed cost pricing to access cloud ecosystems from more economical facilities further from costly Internet gateways.

**Connector beyond Digital Realty’s Ecosystem**
Easily connect to service providers and partners on the Megaport network outside of your data center facility.

**Bandwidth-On-Demand**
Provision your connectivity to cloud services in real-time using our MarketplacePORTAL.

**Flexible Bandwidth with No Term Lock-Ins**
On a daily or monthly basis, consume what you need when you need it without locking into static bandwidth at higher rates.

**MarketplacePORTAL**

**Digital Realty**
Why is Service Exchange important to my business?
A recent survey from Rightscale indicates that 82% of Enterprises are adopting a multi-cloud strategy, citing security, managing multiple clouds, and lack of resources as the top 3 challenges in leveraging the cloud effectively. Service Exchange accelerates adoption of cloud architectures by simplifying private access to multiple clouds.

What value does Service Exchange provide?
Service Exchange future proofs your IT architecture with a secure, high-performance private interconnection service, enabling scalability and flexibility of public and multi-cloud deployments.

How are companies using Service Exchange today?
• Maintaining strict security and compliance policies for any application that requires dedicated and private network connectivity to the cloud.
• Addressing spikes in computing power by using Service Exchange to connect to clouds as needed.
• Instituting an effective back-up or disaster recovery strategy for customer data in a cloud-based storage environment.
• Simplifying provisioning and management of their multi-cloud connectivity requirements with IaaS, PaaS and SaaS providers

How do I order Service Exchange?
• Order a port through your sales rep. You will have the option of ordering a second port for redundancy.
• Once Digital Realty provisions the port(s), you can order VXCs (Virtual Cross Connects) via Service Exchange on the MarketplacePORTAL to make connections to the cloud services you’ve established with a cloud provider.
• Manage your connections to optimize network capacity for your workloads by increasing or decreasing the bandwidth of VXCs.

Can I connect to other data centers using Service Exchange?
Participants on Service Exchange can establish connections to multiple data centers in the Digital Realty ecosystem and beyond through the Megaport fabric.

Where can I go to find more information?

Megaport is a global leader and pioneer in elastic interconnection. Established in 2013 and founded by Bevan Slattery, Megaport built the world's first SDN-based neutral elastic fabric changing the way enterprises, networks, and services interconnect. The high demand for interconnects and the need to change the way bandwidth is acquired has pushed Megaport into new markets including the U.S., where Megaport has completed its core deployment, and Europe, where deployments are currently underway.
