Optimize Data Exchange

Digital business requires a new data infrastructure architecture, one that localizes data aggregation, staging, analytics, streaming and management at global points of business presence. This improves performance and data compliance control necessary to support exploding volume, variability and velocity of data creation, processing and storage to accommodate digital business. The strategy brings the users, networks, systems and controls to the data, which removes barriers of data gravity and creates centers of data exchange to scale digital business.

DATA HUB AT A GLANCE

Deploy, connect and host critical data infrastructure in proximity to users, networks, clouds and things to address data gravity and compliance to scale digital business.

KEY BENEFITS

- Implement distributed data staging and aggregation
- Deploy regional data lakes and distributed data warehouses
- Maintain compliance and sovereignty
- Integrate public and private data sources
- Distribute business intelligence
- Connect global data ecosystems

IMPLEMENT DATA HUBS ON PlatformDIGITAL®

The global data center platform for deploying Data Hubs to:

- Solve global coverage, capacity and connectivity needs
- Deploy tailored infrastructure matched to business need irrespective of size, scale or configuration
- Operate deployments as a seamless extension of global infrastructure with consistent experience, security and resiliency
**DATA HUB STARTER KIT**

This turnkey bundle includes the necessary components and services to rapidly plan, deploy and scale your Data Hubs. The pre-configured solution accommodates a typical enterprise deployment of a Data Hub to solve placement, connectivity and hosting of critical data infrastructure in proximity to users, networks, clouds and things. This enables enterprises to optimize data exchange between employees, customers and business partners to scale digital business at global points of business presence.

</table>

*Custom configurations available.

**PROVEN APPROACH**

Quickly realize the benefits from your Data Hubs deployed globally on PlatformDIGITAL®, by leveraging our Pervasive Datacenter Architecture (PDx™) strategy. This step by step strategy will help you create the new IT architecture required to solve digital transformation.
1. The Data Hub located in close proximity to the Control Hub connects using a Campus Connect or Metro Connect.

2. An out of market Control Hub connects back to the Data Hub using Service Exchange, powered by Megaport. Trusted data from Network Hubs flow to the Data Hub for further analysis and modeling.

3. The Core Switching infrastructure terminates connectivity into the Data Hub and enables access to the cloud for deep analytics and archival storage.

4. Due to the value and sensitivity of enterprise data access, access needs to be strictly controlled and logged.

5. Data Lakes analyze and curate raw data for Data Scientists to use. Refined Data sits in the Data Warehouse for Business Professionals to use.

6. HPC GPU Farm located directly adjacent to data stores for direct access. GPU Farms enable AI Development, Media Content Creation, and complex modeling and simulations.

ABOUT DIGITAL REALTY

Digital Realty supports the world’s leading enterprises and service providers by delivering the full spectrum of data center, colocation and interconnection solutions. PlatformDIGITAL®, the company’s global data center platform, provides customers a trusted foundation and proven Pervasive Datacenter Architecture PDx™ solution methodology for scaling digital business and efficiently managing data gravity challenges.

Digital Realty’s global data center footprint gives customers access to the connected communities that matter to them with 280+ facilities in 45+ metros across 20+ countries on 6 continents.

To learn more about Digital Realty, please visit digitalrealty.com or follow us on LinkedIn and Twitter.
